... More

1. Install Vercel CLI

```
npm i -g vercel
```

2. Open your project and create a file in the root folder called “vercel.json”

```
touch vercel.json
```

& Paste the following code to vercel.json file

```
{
  "version": 2,
  "builds": [
    {
      "src": "dist/main.js",
      "use": "@vercel/node"
    }
  ],
  "routes": [
    {
      "src": "/(.*)",
      "dest": "dist/main.js"
    }
  ]
}
```

3. Then login to vercel using,

```
vercel login
```

4. Finally, Build & Deploy your NestJS application

with yarn :

```
yarn run build
```

or,

```
npm run build
```

Then deploy it with

```
vercel --prod
```

Boom you just deployed your application. ✅ 🚀 🦄

Bonus part:

How to update your app:

you can either connect your app with Github using Vercel dashboard or you can manually deploy with process 4.

That's easy you can deploy your nestJS application to Vercel. Thank you.
